PM9600 16 Key Warehouse Product Entry-Exit Control

Application Information

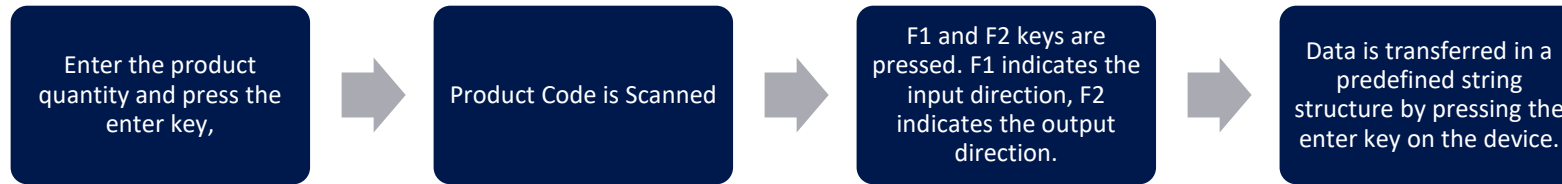

PM9600 16 Key Warehouse Product Entry-Exit Control

- The application was developed upon the request of our customer who wanted to control the products entering and leaving the warehouse.
- In this developed application, the shelf address, product code and stock amount are simply matched, the data is transferred to the Excel table prepared for counting on the customer's computer, in a sequential string structure with keyboard emulation and transferred to the SAP system at the end of the day.
- Before the application, the spare parts consisting of 350,000 parts in the spare parts warehouse were counted manually and the counting processes were taking quite a long time.
- As a result of these long processes, errors in the counting process, personnel circulation and inability to access correct data in stock costing processes were creating problems on the customer side.
- Such an improvement has started to be used as a very suitable solution for companies that use processes such as TPM and 5S for process improvements.
- This solution is eventually used in many production facilities and spare parts warehouses.

Customer Benefits

PM9600 16 Key Warehouse Product Entry-Exit Control

- Standardization of product entry-exit processes in all production facilities on campus,
- Prevention of errors arising from manual entry-exit operations,
- Digitalization of the process,
- Elimination of long-running IT processes and rapid adaptation with a plug-and-play device,
- Simple stock update steps on the SAP system with an example Excel table,

Product Highlight & Benefits

PM9600 16 Key Warehouse Product Entry-Exit Control

Featured Features Specific to the Application

- The screen and 16 keypad on the product,
- IP67 Protection Class,
- Rugged Design Device,
- No malfunctions such as constant pin breakage thanks to contactless charging,
- Long-range data transfer within the warehouse thanks to Star 2.0 communication,
- Instant charging status monitoring thanks to Smart Battery,
- The feature of keeping sequential data in the buffer, which is not found in many devices,
