PM9600 16 Key - Personnel Based Mold Tracking System

Application Information

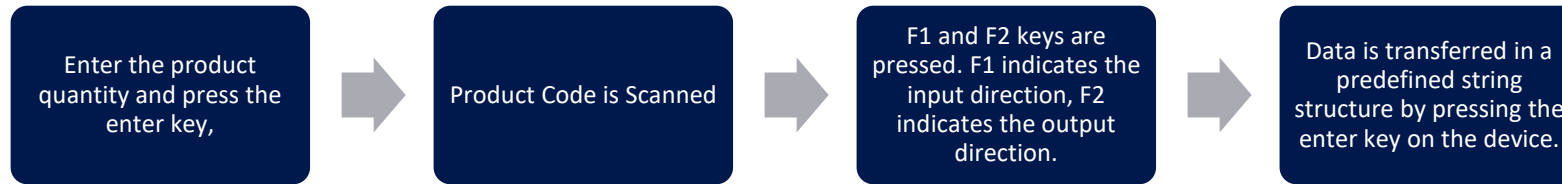

PM9600 16 Key - Personnel Based Mold Tracking System

- The application was developed upon the request of a global customer who wanted to perform mold tracking on a personnel basis.
- In this developed application, a process structure was requested that included the tracking of molds entering the mold workshop from different factories for revision purposes within the facility and the tracking process based on date and time, including product code, PN (request number) and personnel information at the exit stage.
- Data is simply transferred to the Excel table prepared for mold tracking on the customer computer with a sequential system structure using keyboard emulation and transferred to the SAP system at the end of the day.
- Before the application, this structure was being tracked manually via printed documents and had an index problem such as the loss of many molds and the inability to perform performance scaling.
- This type of improvement has started to be used as a very suitable solution for this global IKAM, which uses processes such as TPM and 5S for process improvements.
- This solution can be personalized and used by many customers who want to do such traceability projects.

Customer Benefits

PM9600 16 Key - Personnel Based Mold Tracking System

- Standardization of product input-output processes in mold production facilities on campus,
- Prevention of errors arising from manual entry-exit operations,
- Digitalization of the process,
- Elimination of long-running IT processes and rapid adaptation with a plug-and-play device,
- Simple stock update steps on the SAP system with an example Excel table,

Product Highlight & Benefits

PM9600 16 Key - Personnel Based Mold Tracking System

Featured Features Specific to the Application

- The screen and 16 keypad on the product,
- IP67 Protection Class,
- Rugged Design Device,
- No malfunctions such as constant pin breakage thanks to contactless charging,
- Long-range data transfer within the warehouse thanks to Star 2.0 communication,
- Instant charging status monitoring thanks to Smart Battery,
- The feature of keeping sequential data in the buffer, which is not found in many devices,
